

Geography CBA 1 – Geography in the News

Name: _____

Oisín Argyard

This CBA in Geography is an exciting project that allows you to **explore and analyse a significant geographic event**. This process will enhance your research and analytical skills while deepening your understanding of the geographical forces at play.

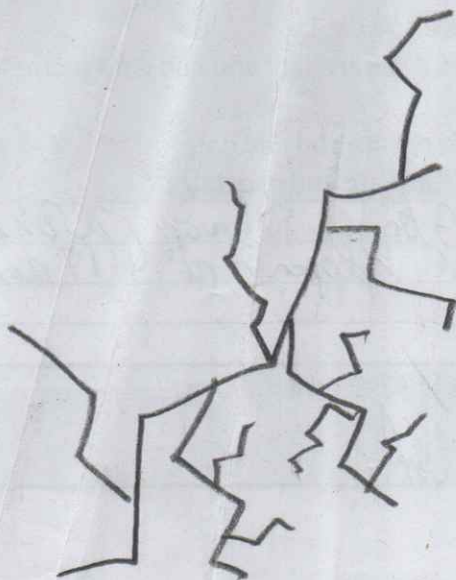

Instructions

Use this handout to complete your CBA1. All information should be written into this handout and then used for your final project. You should spend about 4 classroom hours researching your chosen geographic event (record all details in this booklet) and a further 5 classroom hours preparing your project.

At the end of questions, there is a box to write in your source(s). You can have more than one source for each question.

For articles - write in the name of the website, the title of the article and who wrote it. For videos – write in the name of the channel and the title of the video.

You may submit the project in a PowerPoint, scrapbook or poster format.

Why did you choose this event?

- Maybe you have a keen interest in these types of events.
- Maybe the event was important, or stood out as unusual.
- Maybe events like these are becoming more common and you want to understand what's happening.

I find earthquakes interesting because I can't imagine what it's like to experience one. I want to know more about them and their consequences.

What information, if any, does your book give about this event?

- Pick out important explanations and keywords from this topic in your book.

An earthquake is an intense quaking of the Earth's surface caused by plate movement. A fault line is a crack in the Earth's crust where two plates meet. Sliding boundary: two plates are locked together but still try to move. Focus: the underground starting point of an earthquake. Shockwaves are vibrations. Epicentre: point on the surface directly above the focus.

Your book is a source. What is the name of it and who write it?

Compass, James Lenihan

When did the event happen? How long did it last for?

- If it's an earthquake or landslide, it will only have one date.
- A volcano can stay erupting for months, so put the start date and end date (some volcanoes will be still erupting)
- A storm will go on for a few days, so put the start date and end date.
- Wildfires can last for a few weeks, so put the start date and end date.

In the early hours of the 6th of February 2023 and that same day at 1:30 pm. The first happened at 4:17 am.

Where did you find the information about when it happened?

British Red Cross & Concern USA.

Where did the event happen?

- What country?
- Was there a particular area that was affected, or was it a wide area?
- Storms usually impact more than one country.

Southern Türkiye and the border with Syria. The later one hit 95 kilometers southwest. Near Gaziantep, Aleppo and Adana. It also stretched into Iraq, Georgia, Armenia, Iran, Jordan and Palestine.

Where did you find the information about where it happened?

Center for Disaster Philanthropy

Why did the event happen?

- What caused this event to happen? List all the factors.
- Was there a combination of natural and human causes?
- In the case of tectonic events, state the tectonic plates involved and their movements.

It was caused by tectonic activity along the East Anatolian Fault. It occurred due to the sudden stress release built up along this fault over time. The rupture released a massive amount of energy.

Where did you find the information about why it happened?

Internet Geography

7.8 & 7.7

What were the economic impacts? (at least 2)

- This relates to money and cost.
- How much will it cost the government/s to repair damage?
- What is the knock-on effect of this, do you think?
- Did businesses have to close? What effect might this have for employees?

It resulted in the loss of 11% of the national GDP (Gross Domestic Product). 70% of the blue collar/industrial population left the city of Antalya. An estimate of 70,000 businesses are severely damaged and will be demolished. The World Bank announced USD 1.78 billion to help Turkey. The United States provided \$185 million in aid.

Where did you find the information about economic impacts?

Spark.ngo, Relief Web, World Bank, US Department of State

What were the social impacts? (at least 2)

- This relates to people. - Were people's homes destroyed? What might this mean for them?
- Did people have to leave their homes, even for a short period?
- Were people injured? How many? Was this easy for the hospitals to manage?
- Did anyone die?

Nearly 60,000 people died. Nearly 16 million people were affected. 7.7 million were displaced. The British government needed tents for displaced people. Because it was winter, snowstorms affected people without homes.

Where did you find the information about social impacts?

Barron's, Alarabiza, Relief web, UNHCR

What were the environmental impacts? (at least 2)

- This relates to the environment like plants, animals, and habitats.
- Were any animals killed?
- Were any habitats destroyed? Like forests, rivers etc.
- Did the weather change during the event?

There was flooding as a result of the earthquake in L'Aquila. 1,500 animals were rescued, but tens of thousands died. Many were dehydrated. Damaged buildings released toxic chemicals into the air that infected water sources, affecting ecosystems and people.

Where did you find the information about environmental impacts?

Georgetown Law, Humane World for Animals, Springer Nature

Has an event like this happened in this area before? When? Was it for the same reasons?

- Check the history of these type of events in the area.
- Things like earthquakes, volcanic eruptions and storms can happen in the same area, but sometimes can be 100's of years apart.
- If such an event occurred before, was anything done to stop it from happening again, or to reduce the amount of damage?
- Did other big natural events ever happen?

Earthquakes happened 1999 and 2011, and the Turkish government tightened regulations to try make buildings more resistant to earthquakes. Turkey is a hotspot for earthquakes, there have been 10 major earthquakes there since 1999. There have been landslides and floods too over the years

Where did you find the information about past events?

Georgetown Low, Middle East Eye, Spark

Was there a warning system in place to warn people that the event was about to happen?

- This will apply for volcanic eruptions, earthquakes and storms in particular.

Google had a warning system in place, but it was largely ineffective as it underestimated the earthquake, issuing out only 489 Take Action warnings.

Where did you find the information about a warning system?

BBC

What was done in the immediate aftermath to evacuate people or repair damage?

- This will apply for volcanic eruptions, earthquakes and storms in particular.

Aircraft identified areas of major damage to send people in blankets and tents were supplied to help displaced people.

Where did you find the information about the aftermath?

Reuters, UNCHR

What is the area going to do to prevent these events happening again, or to reduce their damage?

- Is the area introducing any system to prevent this again? Or to reduce the damage.
- Could you suggest something they could do to prevent it from happening or that could reduce the damage?

Concrete could be made with steel to make it more durable. Hospitals built with a seismic isolation system were a lot more durable, offering a blueprint for rebuilding.

Where did you find the information about preventing these events or reduce the damage?

Prevention Web, The Conversation

Can you link any of the UN Sustainability Goals to this event?

- Is the area introducing any system to prevent this again? Or to reduce the damage.
- Could you suggest something they could do to prevent it from happening or that could reduce the damage?

Number 9: Industry, Innovation and Infrastructure.
2 Syria and Turkey had had the infrastructure that would prevent damage from an earthquake, less people would be affected.

Where did you find the information about UN Sustainability Goals?

The Global Goals
