

G1

Friday 28th	9.00 - 9.30	Study
	9.30 - 10.30	Science
	10.30 - 10.45	Break
	10.45 - 11.15	Study
	11.15 - 12.15	History
	12.15 - 13.15	Lunch
	13.15 - 13.45	Study
	13.45 - 14.45	Graphics

Topics

Chapter 31 – Speed, Velocity and Acceleration

Chapter 33 – Energy ✓

Chapter 34 (34.1- 34.6) – Electric Current ✓

Chapter 25 – Structure of an Atom

Tips for Revision:

- Review your class notes and textbook summaries at the end of each chapter.
- Practise exam-style questions and calculations.
- Use flashcards for key terms and formulas.
- Redraw diagrams (atoms, circuits, graphs) from memory.
- Quiz yourself

Chapter 31 - Speed, Velocity and Acceleration

- Know the difference between speed and velocity. ✓
- Know how to calculate speed ✓

$$\text{Speed} = \text{distance} \div \text{time.} \quad \checkmark$$

- Know how to calculate average speed. ✓
- Understand what acceleration means and how to calculate: ✓

$$\text{Acceleration} = \frac{\text{Final speed} - \text{Initial speed}}{\text{Time.}}$$

- Be able to read and interpret distance-time and speed-time graphs. ✓
- Know what the graphs look like when an object is stationary, moving at constant speed, or accelerating. ✓

Chapter 33 - Energy

- Know what energy is and the different forms of energy (kinetic, potential, heat, light, sound, chemical, electrical, nuclear). ✓
- Understand the Law of Conservation of Energy. ✓
- Be able to identify energy conversions in everyday examples. ✓
- Know the difference between renewable and non-renewable energy sources
2 advantages and disadvantages. ✓
- Understand energy efficiency, identify energy dissipation and ways to reduce energy loss (e.g., insulation). ✓
- Be able to draw and interpret a Sankey diagram. ✓
- How to calculate: ✓

- $\text{Work} = \text{Force} \times \text{Distance}$ ✓

- $\% \text{ Energy Efficiency} = \frac{\text{Useful energy output}}{\text{Total energy output}} \times 100/1$ ✓

Chapter 34 (34.1–34.6) – Electric Current

- Know that electric current is the flow of electrons. ✓
- Be able to identify and draw circuit symbols (cell, battery, bulb, switch, ammeter, voltmeter). ✓
- Know the difference between series and parallel circuits. ✓
- Know:
 - Current is measured in amperes (A) using an ammeter. ✓
 - Voltage is measured in volts (V) using a voltmeter. ✓
- Know the difference between conductors and insulators. ✓
- Be able to draw and label simple circuit diagrams and explain how they work. ✓

Chapter 25 - Structure of an Atom

- Know that an atom is the smallest part of an element. ✓
 - Know the three subatomic particles:
 - Proton (positive, in nucleus) ✓
 - Neutron (neutral, in nucleus) ✓
 - Electron (negative, orbits nucleus) ✓
 - Understand atomic number and mass number.
 - Be able to calculate the number of protons, neutrons, and electrons in an atom.
 - Be able to draw simple Bohr atomic models.
-
