

$$\frac{130}{130} - 100\%$$

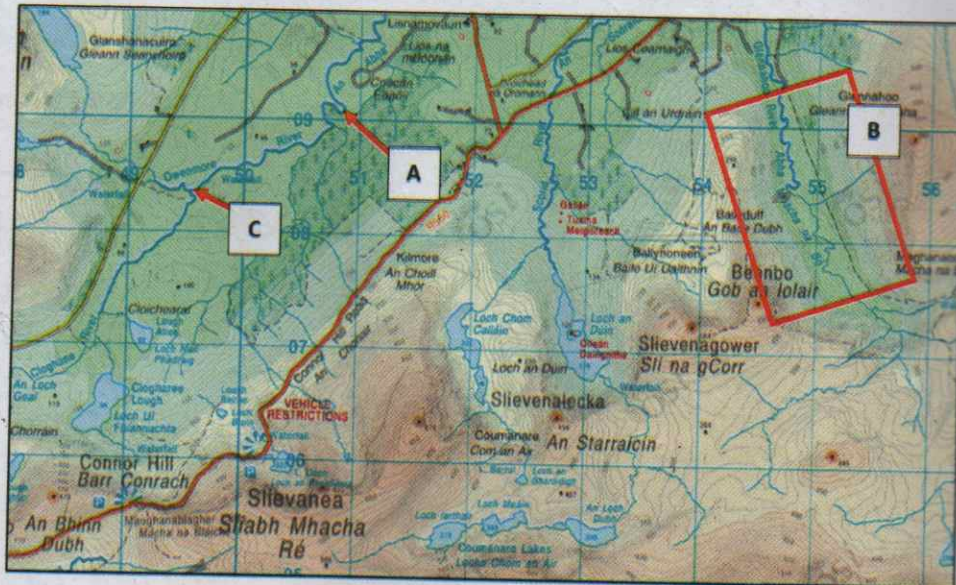

Name: *Oisín Argand*

Excellent

Question 1

Question 6

- (a) Examine the Ordnance Survey map extract below and the legend on page 30 and answer each of the following questions.

- (i) Which of the following features formed by rivers can be seen at A above?
Tick (✓) the correct box.

Meander ☒ *3*
Delta ☐
Levee ☐

- (ii) Which of the following features formed by glaciation can be seen at B above?
Tick (✓) the correct box.

Drumlin ☐ *3*
Esker ☐
U-Shaped Valley ☒

- (iii) What is the name for the point where one river joins another, labelled C on the map extract above?

Confluence

- (iv) Give one piece of evidence from the map extract on the previous page that shows this area was developed to support tourism and state how it can be used by tourists.

14

Evidence: Viewing points
How it can be used by tourists: Can look at landscapes from them

5

Question 2

- (b) Explain how either the processes of river erosion or the processes of glacial erosion change the shape of the landscape.

The ~~process~~ glacial processes of plucking and abrasion change landscapes. Plucking surrounds trees or rocks in water which becomes ice and moves with the glacier, bringing the tree/rock with it. Abrasion is when the load of a glacier is pressed up against the land and carves some of it out as it moves because of the glacier moving.

5

Exedg

Question 3

Question 2

- (a) Examine the satellite photograph below showing part of Dungarvan Harbour and answer each of the following questions.

- (i) Which of the following is the name for the part of a river that is tidal, labelled A above? Tick (✓) the correct box.

Source ☐

Estuary ☒

Tributary ☐

3

- (ii) What is the name for a bend or turn in a river, labelled B above?

Meander 3

- (iii) The feature labelled C on the satellite photograph above is known as a sand spit. What is the name of the process of coastal transportation that led to its formation?

Longshore drift 3

- (b) (i) Name one river that you have studied.

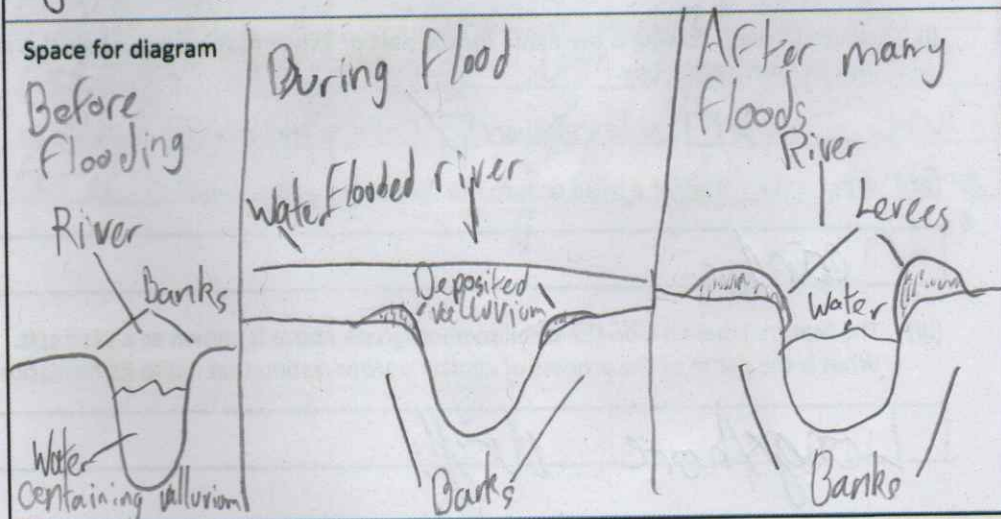

Lifey 3

- (ii) List two features that are formed by the process of river deposition.

1. Delta 3
2. Levee 3

- (iii) Explain how the process of deposition forms one river feature that you have studied.
Use a labelled diagram(s) in your answer.

A levee is formed when a river floods one time. When a river floods it deposits alluvium containing sand, silt and small rocks on its banks. Over many floods, this alluvium builds up to form a levee, a bump of material on a bank of a river that also functions as a natural protection against flooding.

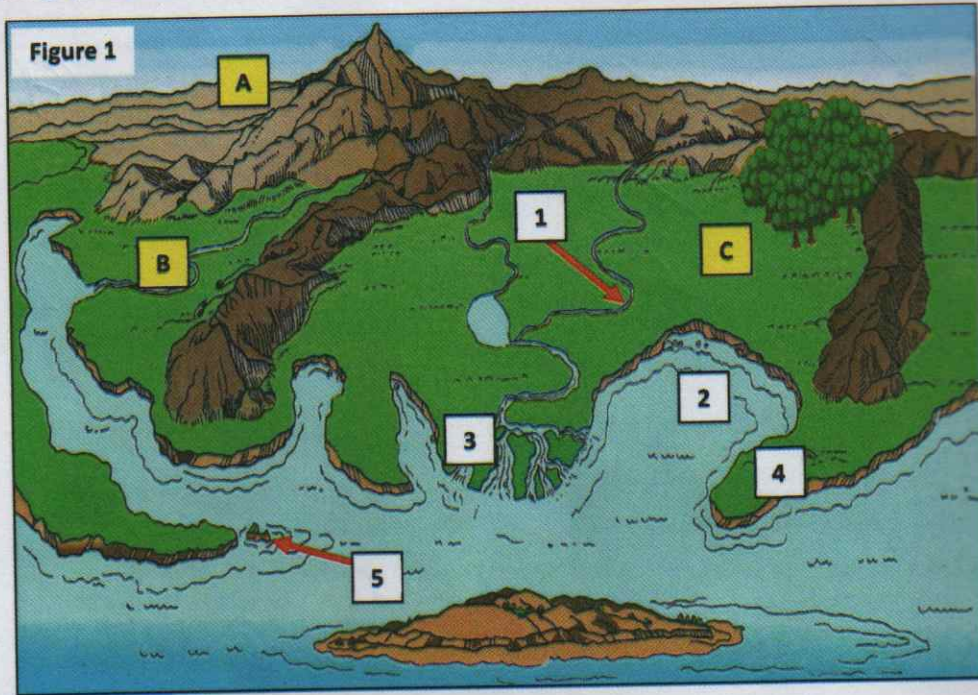

30

12

Question 4

Examine **Figure 1** which shows a landscape that has been shaped by different physical processes including erosion, transportation and deposition by rivers and the sea. Answer each of the following questions.

- (a) In the table below, match each of the features labelled 1 to 5 on **Figure 1** with the correct term from the box. One has been completed for you.

Bay	Meander	Source
Headland	Delta	Sea stack

Number	Feature
1	Meander ✓
2	Bay ✓
3	Delta ✓
4	Headland
5	Sea stack ✓

8

Question 5

In the boxes provided, match each of the letters in **Column X** with the number of its pair in **Column Y**. One match has been completed for you.

Column X	
A	Abrasion
B	Hydraulic Action
C	Solution
D	Attrition

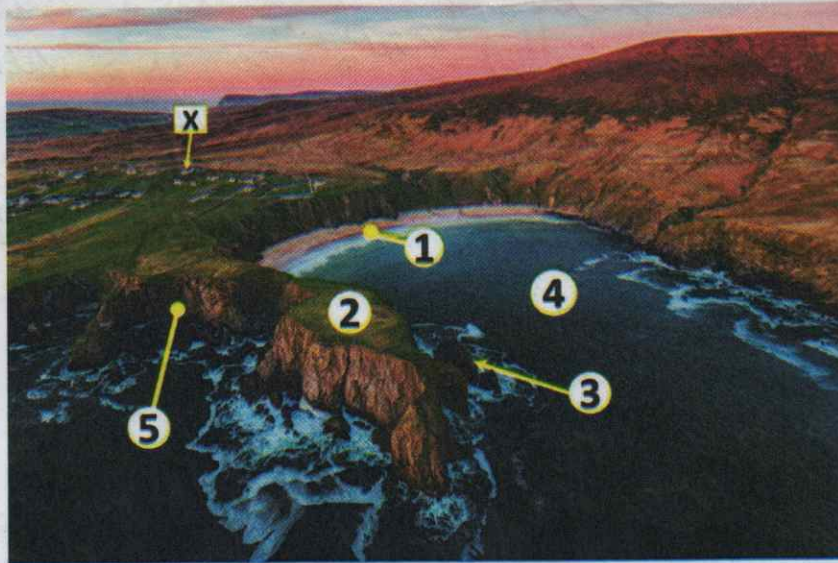

Column Y	
1	Chemicals in water dissolving rocks.
2	Stones hitting off each other while being carried by the river.
3	The river's load hitting against the bed and the banks of the river.
4	The force of moving water.

X	Y
A	3
B	4
C	1
D	2

3

Question 6

- (a) Examine the photograph of a coastal area shown below and answer each of the following questions.

- (i) Match each of the labels on the photograph 1 to 5 with the feature that best matches it in the table below. One has been completed for you.

Feature	Number
Headland	2
Sea stack	3
Beach	1
Cliff	5
Bay	4

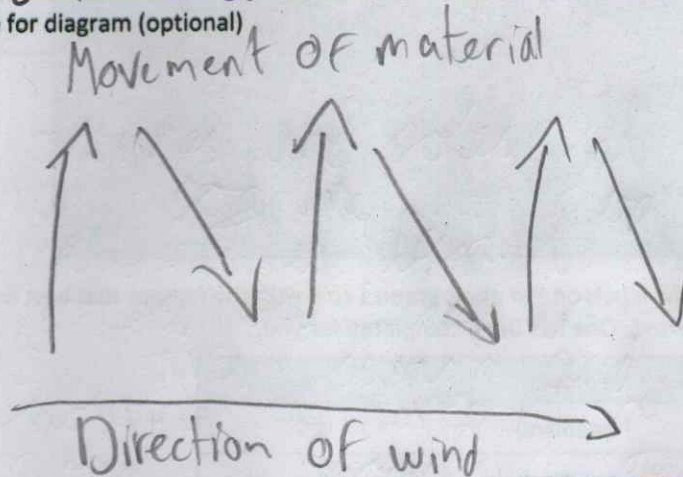

- (ii) The house labelled X on the photograph is a holiday home for tourists. Describe **one** reason why the area on the photograph would attract tourists.

The view is very nice, there are mountains in one direction and a coastline full of coastal features in the other.

- (iii) Explain how longshore drift transports material along the coast.
You may also draw a diagram if you wish.

Material in the water gets pushed onto the ~~beach~~^{coast} by a wave's swash. It is then pulled back by its backwash. All the while, however, wind is blowing the waves diagonally, bringing the material along the coast with each wave.

Space for diagram (optional)

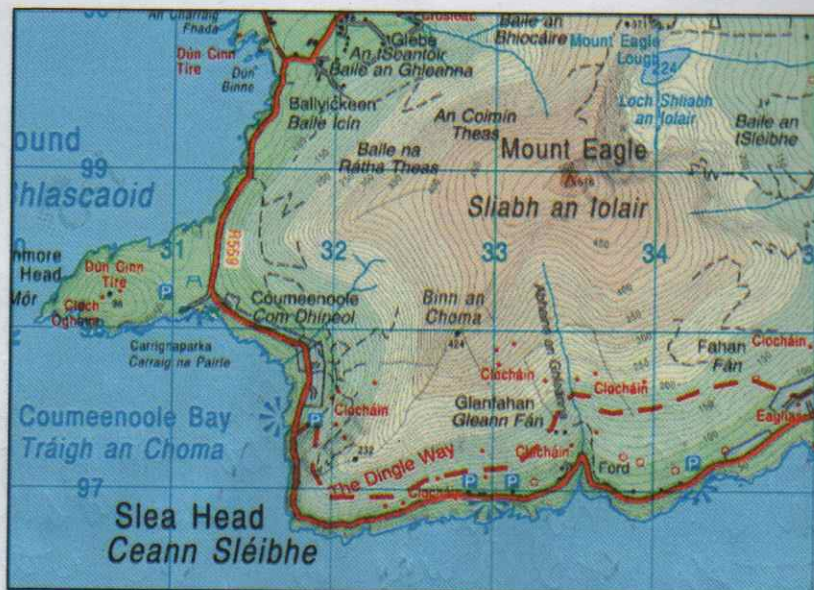

10

25

Question 7

- (a) Examine the 1:50 000 Ordnance Survey map extract below of Slea Head in Co. Kerry and the accompanying legend which is available on page 30. The road shown on the extract is a popular tourist route.

- (i) Which of the following coastal processes had the most impact on shaping the land on the map extract above? Tick (✓) the correct box.

Coastal deposition ☐
 Coastal erosion ☒

8

Question 8

(c) People try to control natural processes in many different ways.

Discuss one example you have studied where people try to control a natural process(es). In your answer give the location and the natural process(es).

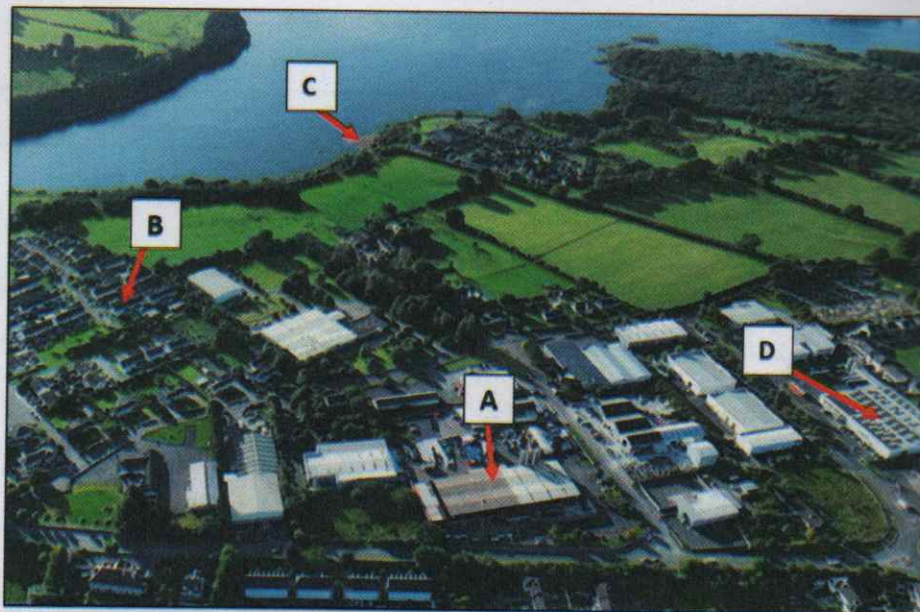

Groynes are poles set up along a coastline to stop longshore drift. They disrupt the natural process by getting in the way of waves' swash and backwash, slowing the movement of material along the coast. Groynes can be found at beaches that suffer from longshore drift problems, like Voughal Beach in County Cork.

⑦

Question 9

Question 8

- (a) Examine the aerial photograph of Blessington below and answer each of the following questions.

- (i) Match each of the locations on the photograph labelled A, B, C and D with the evidence of a function that best matches it in the table below.

Evidence of Function	(i) Location on Photograph
Supermarket	D
Beach	C
Factory	A
House	B

- (ii) Match each of the functions in the box below with the evidence listed in the table.

Commercial	Residential	Recreational	Industrial
-----------------------	------------------------	--------------	-----------------------

Evidence of Function	(ii) Function
Supermarket	Commercial
Beach	Recreational
Factory	Industrial
House	Residential

- (iii) In which part of the photograph on the previous page can the lake be seen?
Tick (✓) the correct box.

Background ☒
Middleground ☐
Foreground ☐

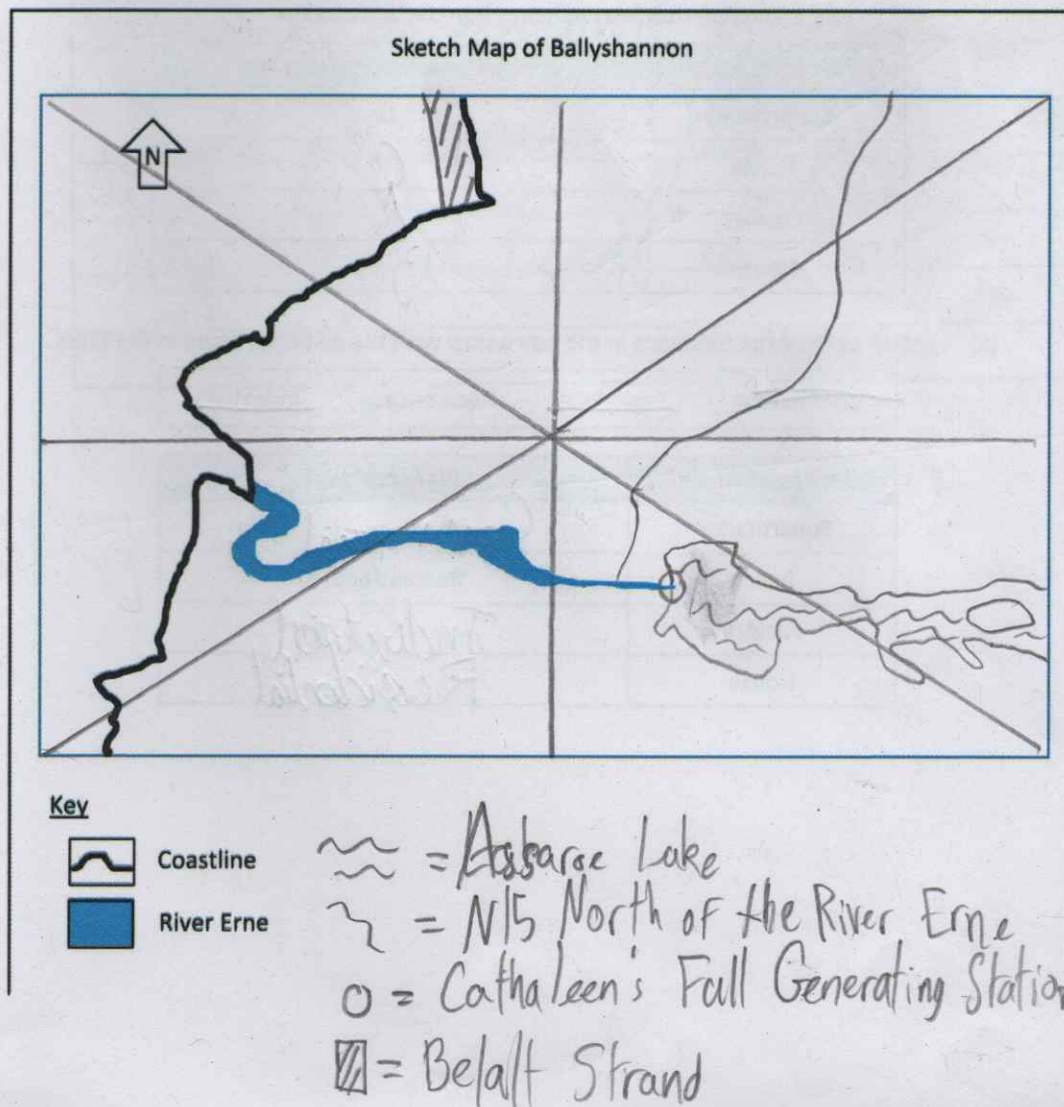

- (iv) Churches and graveyards are often found near the centre of a town. What function are these an example of?

Religious

Question 10

- (d) Examine the 1:50 000 Ordnance Survey map and legend supplied with this paper. In the space provided below complete the sketch map of the Ballyshannon area by showing and naming each of the following:

- Assaroe Lake
- The N15 north of the River Erne
- Cathaleen's Fall Generating Station
- Belalt Strand.

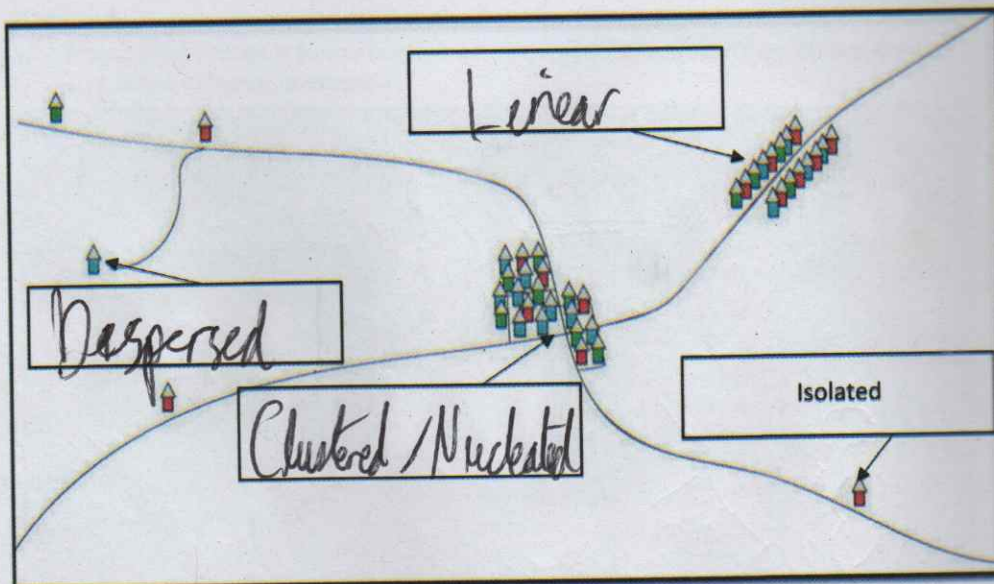

Question 11

Question 8

- (a) (i) Match each of the terms in the table below with the settlement pattern in the diagram that best matches it. One has been completed for you.

Isolated	Linear	Clustered/Nucleated	Dispersed
----------	-------------------	--------------------------------	----------------------

- (ii) Examine the 1:50 000 Ordnance Survey map of Ballyshannon supplied with this paper. Give a four-figure grid reference for an example of a linear settlement pattern that can be seen on the map.

G 89, 59

- (iii) Explain briefly why linear settlement patterns develop.

If there is a main road that many people want to have access to, they build their houses along it leading to a linear settlement pattern.
